

AI-powered Earthquake Data Denoising

Data Science Lab 2024

Challenge givers: Niko Dahmen, Men-Andrin Meier

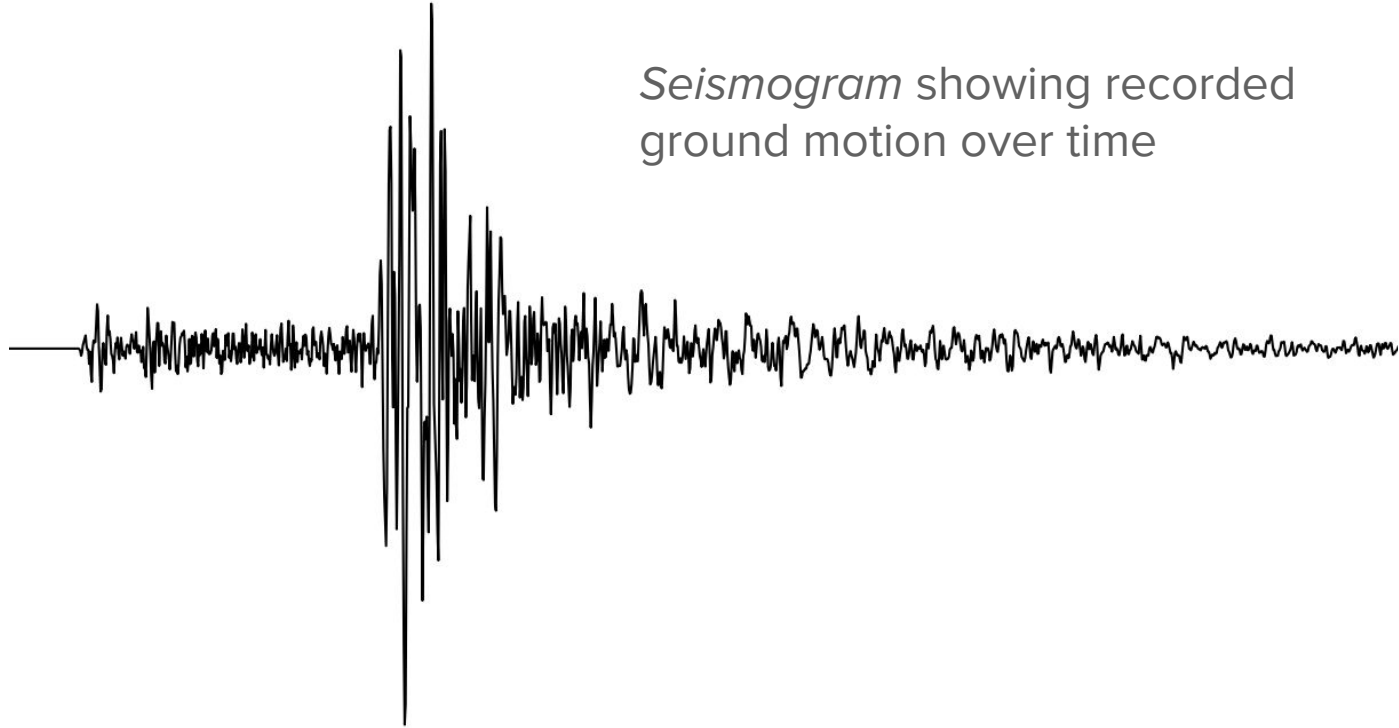

ETH Zurich

- Organisation
- Intro: earthquakes and their recordings, key parameters
- Swiss seismic network and earthquakes
- Data set
- Task & Evaluation

Organisation

Intro

Earthquake data

Earthquake recordings

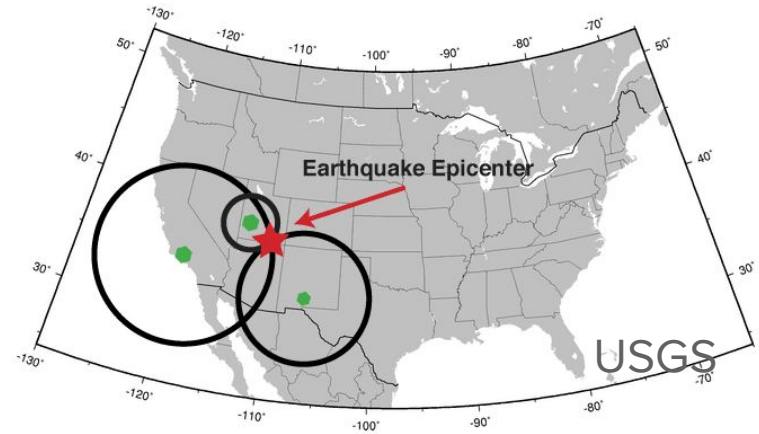

Earthquake - Key Parameters

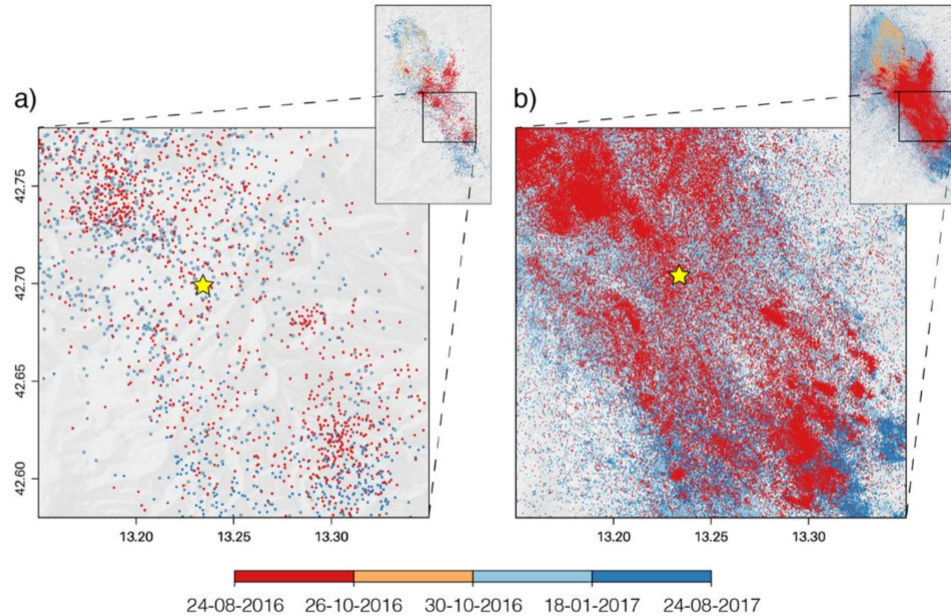

Location (hypocentre) - triangulation using time difference of P and S arrivals from several stations

Strength (magnitude): estimated from recorded peak amplitude and distance to quake

(simple methods)

Improvements thanks to ML methods

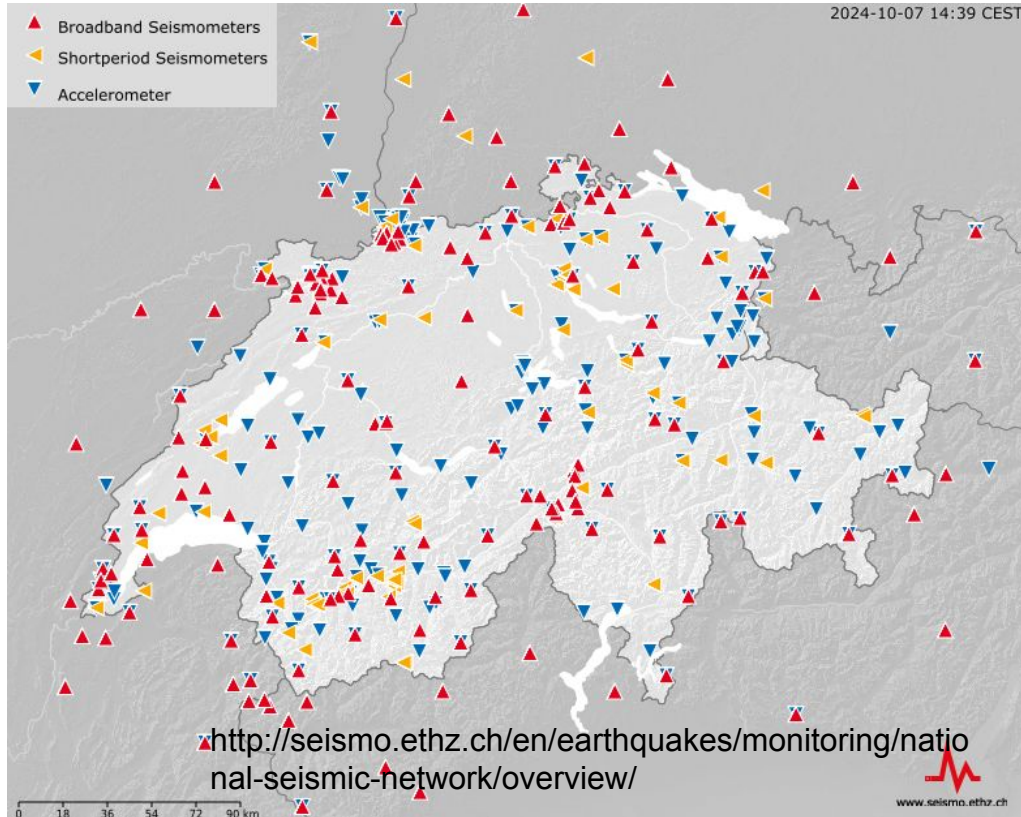

Beroza et al. (2021)

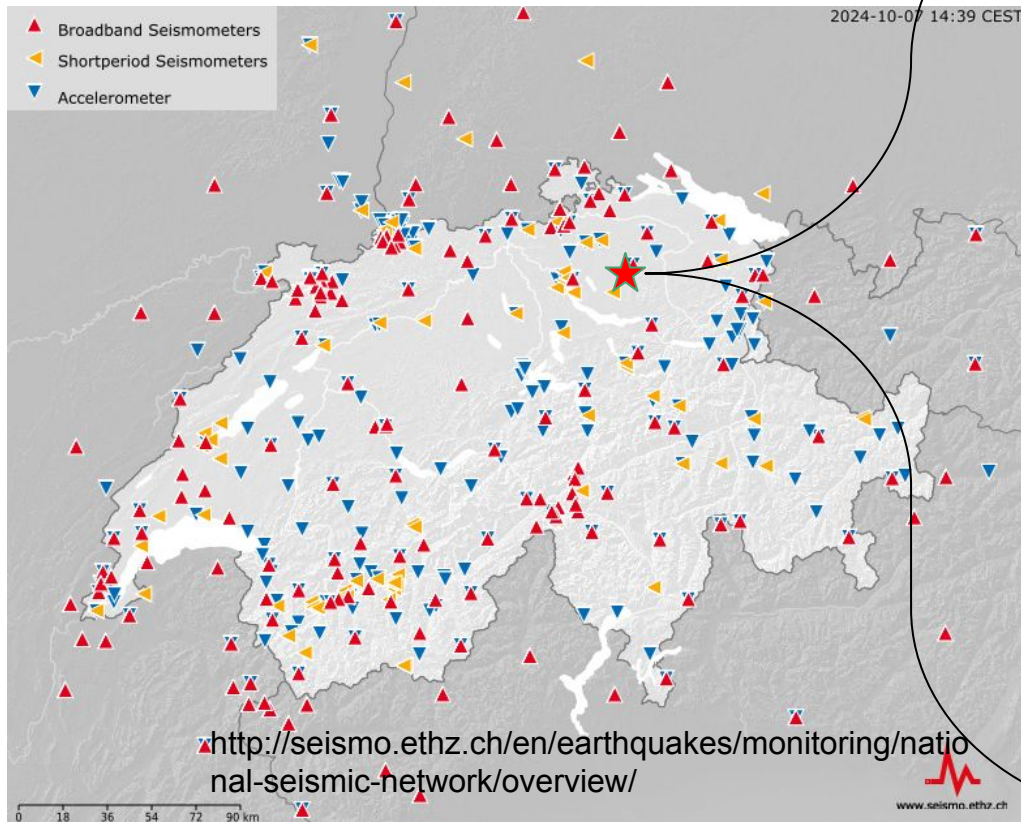

Fig. 1 A year of seismicity in the epicentral area of the 2016 $M = 6.0$ Amatrice earthquake (star) in Italy color coded by time of occurrence. a Real-time catalog, available at <http://cnt.rm.ingv.it/> and **(b)** machine-learning catalog¹⁶ are shown for event magnitudes above their respective magnitude of completeness^{12,16} $M_c = 2.2$ and $M_c = 0.5$.

Swiss seismic network and earthquake recordings

Swiss Seismic Network

Typical Earthquake recording

Sorted by distance

SED/ETH

Continuous data

24 hours of data

Data set

Data set

3 components:

Up-Down

North-South

East-West

Event signals

(snippets of 180 seconds,
100 samples-per-second)

Noise signals

(snippets 80 seconds, 100
samples-per-second)

Data set

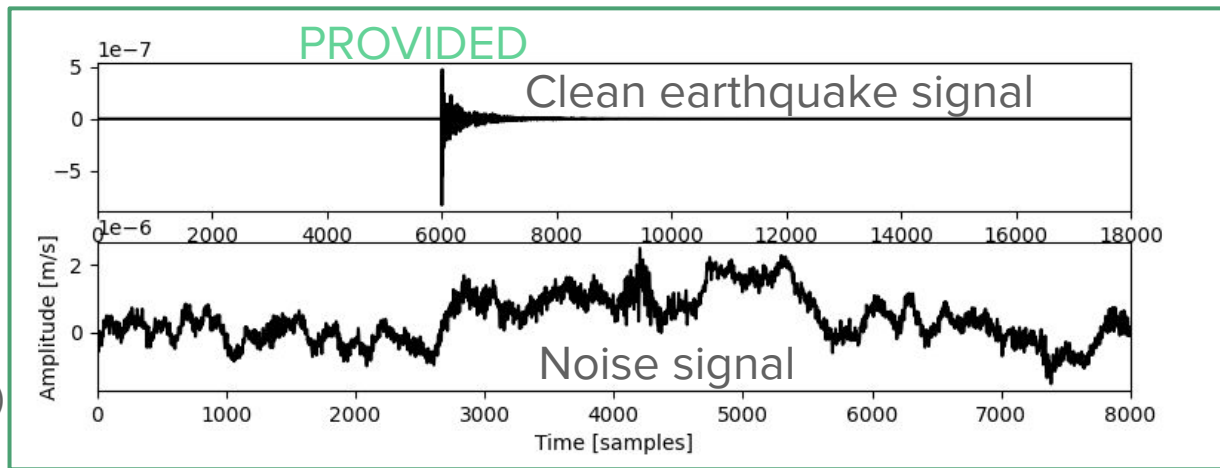

Event signals

(snippets of 180 seconds, 100 samples-per-second, sps, P-wave always at 60s)

Noise signals

(snippets 80 seconds, 100 sps)

Noisy earthquake
signal (e.g. 60 seconds
snippet, 100 sps)

Data set

Event signals

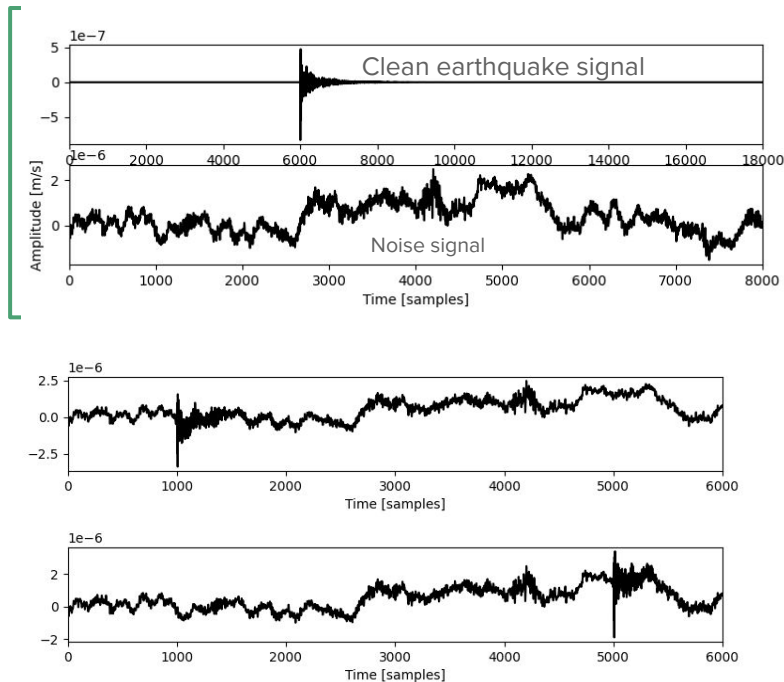

~25k

Noise signals

>25k

Noisy earthquake signal

XX combinations of event and
noise signals (with variations in signal-to-noise
ratio = relative amplitude of earthquake and noise signals,
position of EQ signal in time window,...)

Task

Noisy earthquake signal
(EQ + noise signal)

Denoised earthquake signal

Evaluation - comparing denoised to true/clean EQ signal

Noisy earthquake signal
(EQ + noise signal)

Onset of EQ signal

Denoised earthquake signal

Waveform similarity

Peak amplitude

Benchmarking against conventional tools (digital filter) and existing DL denoiser

Where to start?

MarsQuakeNet: A More Complete Marsquake Catalog Obtained by Deep Learning Techniques
